SEAT NO. _____

NED UNIVERSITY OF ENGINEERING & TECHNOLOGY

FINAL YEAR FALL SEMESTER (SOFTWARE ENGINEERING)
EXAMINATIONS 2019
BATCH 2016-2017

Time: 3 Hours

Dated:08-02-2020
Max.Marks:60

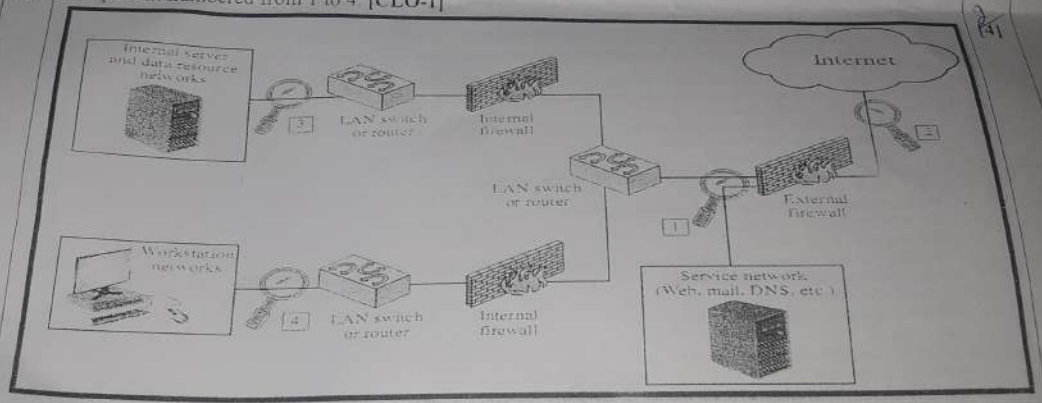
Network & Information Security - CT-460

47

Instructions:

- **Attempt ALL questions.**
- **Make neat and clean diagrams where necessary.**
- **Questions can be attempted in any order but all parts of a question must be attempted together.**

Q1 (a)	**EXPLAIN** with the help of diagram the key generation process of AES algorithm. **[CLO-1]**	4 [4]
(b)	**DESCRIBE** the Worms and their following attributes. **[CLO-1]** • Multiplatform • Multi-exploit • Ultrafast spreading • Polymorphic • Metamorphic	4 [4]
(c)	**ELABORATE** with the help of diagram how confusion and diffusion is achieved in DES Algorithm. **[CLO-1]**	3 [4]
Q2 (a)	Briefly **EXPLAIN** the Security components of the following diagram i.e. different firewalls and the component numbered from 1 to 4. **[CLO-1]**	[4]



(b) Suppose you have a new smartphone and are excited about the range of apps avail-able for it. You read about a really interesting new game that is available for your phone. You do a quick Web search for it and see that a version is available from one of the free marketplaces. When you download and start to install this app, you are asked to approve the access permissions granted to it. You see that it wants permission to "Send SMS messages" and to "Access your address-book".
DISCUSS the answers to the following question. **[CLO-1]** 4 [4]

A B C D E F G H I J K L M N O P Q R
0 1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17
S T U V W X YZ
18 19 20 21 22 23 24 25

- Should you be suspicious that a game wants these types of permissions?
- What threat might the app pose to your smartphone,
- Should you grant these permissions and proceed to install it?
- What the types of malware it might be?

(c) **EXPLAIN** the three logical component of an Intrusion Detection Systems (IDS). **[CLO-1]** [4]

Q3

(a) **APPLY HILL Cipher** to encrypt Message $\begin{bmatrix} A \\ C \\ T \end{bmatrix}$ with the following key. Then generate the original text from the cipher text using the inverse of key matrix modulo 26. **[CLO-2]** [4]

$$\begin{bmatrix} 6 & 4 & 1 \\ 13 & 12 & 10 \\ 8 & 7 & 5 \end{bmatrix}$$

(b) Alice wants to send message "6" to Bob using RSA Algorithm. Given, **p=2, q=7.** **CALCULATE** the Public, Private Key, Cipher Text, and Decrypt the Cipher Text to recover the original message i.e. "6". **[CLO-2]** [4]

(c) Consider the details of the X.509 certificate shown below. **DETERMINE** the answers to the following questions **[CLO-2]** [4]

a. Identify the key elements in this certificate, including the owner's name and public key, its validity dates, the name of the CA that signed it, and the type and value of signature.
b. State whether this is a CA or end-user certificate, and why.
c. Indicate whether the certificate is valid or not, and why.
d. State whether there are any other obvious problems with the algorithms used in this certificate.

Q4 (a)	An enterprise network comprises of has different network devices (Routers, Switches etc.), Servers like Web, Email, DNS etc. and end-users. **CONSTRUCT** defense mechanism against DDoS attacks on this organization by taking into consideration organization services. **[CLO-2].**	5 [6]
(b)	Assume that one of the largest enterprises has been hit by Advanced Persistent Threat (APT) which is class of Malware. You have assigned the task to mitigate the attack in order to minimize the current damage. The other task assigned is to propose a plan in order to protect the organization from such attacks in future. **APPLY** APT countermeasures approach based upon the malware protection recommendations. **[CLO-2].**	3 [6]
Q5 (a)	You are given the following "Informal Firewall Policy" details to be implemented 1. E-mail may be sent using SMTP in both directions through the firewall, but it must be relayed via the DMZ mail gateway. External e-mail must be destined for the DMZ mail server. 2. Users inside may retrieve their e-mail from the DMZ mail gateway, using either POP3 or POP3S, and authenticate themselves. 3. Web requests (both insecure and secure) are allowed from any internal user out through the firewall but must be relayed via the DMZ Web proxy. 4. Web requests (both insecure and secure) are allowed from anywhere on the Internet to the DMZ Web server. 5. DNS lookup requests by internal users are allowed via the DMZ DNS server, which queries to the Internet 6. External DNS requests are provided by the DMZ DNS server. **APPLY** suitable packet filter rule sets to be implemented on the "External Firewall" and the "Internal Firewall" to satisfy the afore-mentioned policy requirements. **[CLO-2].**	4 [6]
(b)	***DETERMINE*** *how you will secure a website* **www.ecommerce.com** *using PKI and HTTPS by taking into consideration the security requirements of ecommerce websites.* **[CLO-2]**	4 [6]
